

# HOW DIGITAL JOB DISPATCHING

Makes Your Team's Workday Easier

Fred is a plumber working for Bob's Plumbing Services. Digital job dispatching makes his typical day at work (along with those of the other plumbers he works with) more streamlined and efficient. Here's a look at how the power and flexibility of digital job dispatching positively impacts Fred's typical workday:

## Step 1

### Receive Work Order

Fred receives a work order digitally for a new job to add to his schedule directly from the office (straight to his mobile device). With no need to run to the office first for any reason, Fred can start tending to this new service request almost immediately.

### Travel to Job Location

Using transit routes dispatched to him, Fred makes his way to the job location, faster than the estimated arrival time that was shared with the new customer.

## Step 2

## Step 3

### Rolling Up the Sleeves

Fred arrives at the job site, referencing the digital work order that was dispatched to him to make sure he knows what to expect from this particular job and to ensure he has the proper equipment and capacity to get it done in a timely manner.

### Filling out the Work Order

After the job is completed, Fred fills out the work order from his mobile device, recording the details of the job's completion. He attaches photos, digital signatures, customer information, and any other specifics pertaining to the service he performed, then sends it back digitally and seamlessly to the office.

## Step 4

## Step 5

### Service Completion

The customer thanks Fred for the quality and timeliness for the job completed. Fred receives a notification for a new work order dispatched to him for a new job nearby, and then he's on his way out to this next service request.
