# Actsoft's StateRAMP Authorization

## What Is StateRAMP?

StateRAMP is a state-specific version of the federal government's FedRAMP program, which has put standardized security benchmarks in place for cloud-based services that government agencies use. Vendors that receive StateRAMP authorization have successfully passed each of the stringent requirements mandated, as well as gained approval from a third-party assessment organization to verify compliance.

## What does it mean for Actsoft to be StateRAMP Authorized?

Being StateRAMP authorized means Actsoft has met the mandated conditions and is able to provide its applications and services to agencies on a state-by-state level. Ongoing auditing helps ensure our organization keeps valuable information highly safeguarded, free of co-mingling between commercial and government entities, and in compliance with set forth regulations.

## How does Actsoft's StateRAMP Authorization help your organization?

- Ensures your valuable information is kept more secure and compliant.
- Better protects your agency from receiving costly noncompliance fines or penalties.
- Keeps tabs on workforce activities with greater security guarding your operations.
- Safeguards important data when exchanging it with colleagues in your agency.
- Enhances efficiency though workforce management tools that improve savings and output.
