

Do you know ...

The **Dispatching Module** provides the ability to send work orders to technicians out in the field?

- The Service Form within the Dispatching Module makes it possible to send additional information such as driving directions, a serial number, or special instructions to the recipient of the work order.
- The Order Status Form within the Dispatching Module allows the Technician to send back additional information such as part details, photographs, or a signature.
- Customizable Order Statuses make it possible for the dispatcher to track the progress of a work order at a glance.

The Dispatching Module is a robust tool that empowers users to digitize and streamline their entire work order process using a handheld device.

Example Application

← Dispatch
