

Example Application

Do you know ...

The **Geofences by Group** feature allows a customer to organize their geofences, so each group only sees the geofences relevant to them.

- This reduces the number of visible geofences shown on the map, reducing clutter.
- It limits the number of groups shown when creating geofence alerts.
- This feature affects the live view map, alerts, and reports.

A simple and concise way to reduce clutter on the maps, making it easier to view important points of interest and become much more efficient.

The screenshot shows the 'LB & Co., Inc.' application interface. The main section is titled 'Groups' and includes a search bar, a 'Total members 4' indicator, and a table of groups. The table has columns for 'Name' and 'Members'. The 'Local' group is selected and highlighted in blue.

Name ^	Members
No groups assigned	3
Local	1
National	0
Regional	0

Below the table are two side panels: 'Members of this group' and 'Users who view this ...'. The 'Members of this group' panel shows a list of users, including 'Katie Vehicle'. The 'Users who view this ...' panel shows a list of users, including 'Evalia Test', 'Katie Vehicle', and 'LB & Co'. Both panels have an 'Edit' button at the bottom.
