

# Example Application

## Do you know ...

The **Alerts** feature is event-driven and triggered by criteria set to send an e-mail as soon as the event occurs.

- Alerts can be set for: Aggressive Driving, Geofences, Idle Time, Speeding, Hard Stopping, etc.
- Set each Alert for a specific time frame, day, and set of users.
- Notifications can be sent to multiple e-mails and the user within the application.

The Alerts feature is an easy-to-set-up and robust feature that communicates business-critical events as they happen.

You are creating a new alert

### Alert specifics

Alert type:  Alert name:
