

Example Application

Do you know ...

The **Bulk Order Updates** feature makes it possible to change the status of a block of orders instead of one by one.

- Select and update multiple or all orders in a block.
- Updates can be made to system statuses of: “Unassigned”, “Cancel Orders”, and “Close Orders”.
- Orders must be in the appropriate order status of the hierarchy to select the new status.

The Bulk Order Updates feature is a quick and easy way for dispatchers to assign, reassign, or cancel orders in a block.

The screenshot displays a software interface for "LB & Co., Inc." with a "Lawn Care Details" section. Below this, there are summary statistics: "Orders 4", "Unassigned 0", "Active 4", and "Comp 0". A "Display options" section includes a search bar and a "Filter orders (on)" dropdown. The main part of the interface is a table with columns for "Client name", "Service", and "Status". Four rows are visible, all for "Actsoft LB & Co" with "Maintenance" service and "Assigned" status. A context menu is open over the table, showing options: "Update orders", "Unassign orders", "Close orders", and "Cancel orders".

	Client name	Service	Status
<input checked="" type="checkbox"/>	Actsoft LB & Co	Maintenance	Assigned
<input checked="" type="checkbox"/>	Actsoft LB & Co	Maintenance	Assigned
<input checked="" type="checkbox"/>	Actsoft LB & Co	Maintenance	Assigned
<input checked="" type="checkbox"/>	Actsoft LB & Co	Maintenance	Assigned
